

The refrigerator

The refrigerator holds food, there are many on different sizes, some even have a small place to get ice, and it has a place to hold food or freeze stuff. It can hold a lot of food, and it also holds frozen food, some are white, There's also some in different colors. There is also a mini fridge.

What problem did the fridge solve?

The refrigerator increased the efficiency of the icebox solving the problem for ice melting, it also has another side for food that is not supposed to freeze or if u don't want it to freeze, this side holds food as well, it helped keep food fresh and not rotting.

When was it invented

The refrigerator was invented in 1899. It was the first refrigerator to ever exist. And it was also mechanical. This helped fix many problems, and now people have a place to put/store their food inside of. and now fridges even have ice dispensers

Who invented it?

Albert t. Marshal invented the refrigerator. They started around the 1750s and started making it in the 1800s. And finished in 1913. It was a long process, but now it takes a few hours to make a fridge.

What other inventions came due to the refrigerator?

Before the refrigerator was invented, people used snow, or ice from the mountains, since fridges did not exist during that time people had to use what they could to keep their food cold, then after ice cellars came, it was built from straws and wood. Then they filled it with ice and snow.

Why was it so important?

Now refrigerators are important, why? Because people can use them to keep ice frozen, and to store food inside, and without refrigerators we couldn't have ice cream, good food. Or a place to put our food.
