

Invention Report

By:Arka Trossian

1. What does the invention do?

The invention is something that makes light so you can watch the television or read a book. This invention is really good because there's some people who love reading and they can't see without a light. Then, there's a television lover who wants to watch the television for some funny old movies like the Flintstones which I think all of you maybe know.

What problem does the invention solve?

What the invention solves is that when one day your reading a book and there's no light and its not bright you can turn on the light later if needed more.If i can't see the words again in my book i can just turn on my light bulb and see the words perfectly. That's why in my opinion you should need a light bulb.

When was it invented?

The light bulb was a very good invention that was useful. It was invented in 1879.

Who invented it?

The person who invented the light bulb is called Thomas Edison. He was the first person ever in the entire world to make the light bulb. The lightbulb is very useful because the light can make a lot of things change by needing the light to sew and make something out of it.

What other inventions came due to this invention

The light bulb was invented in 1879. Another light bulb was made in 1878 called the incandescent. Thomas Edison filled his first patent application for improvement in Electric Lights.

Why was this invention important

This invention was very important for everything like reading books, watching television, and everything else. It was made so you can see stuff better if it looks dark inside of your house.

The End!!
