

Research one area that has been affected by a water shortage, and write an informative essay describing how people are responding to this shortage.

There was a water shortage that happened in Libya and that made them stressed because nobody likes to have a water shortage in their country. The governor said that the water shortage is going to last for 60 to 100 years. Libya is a country that struggles about the water shortage/Scarcity. The situation has become more problematic because of the population growth.

Another thing about the water shortage is that Libyan fresh water shortage is the expanding Agricultural/country . Libya uses 93% of its water for country purposes. Some crops command vast amounts of water typically this Large use results in water shortage/waste throughout agricultural production and processing.

The water shortage happened in libya because for every water shortage that happens there is a way that water shortages happen right? It doesn't just teleport in front of your face for no reason because there is a reason. A water shortage happens by the weather, weather? Yes indeed it happens by the weather.
