

Assembly Line

By Laura Katalyants

Who invented the Assembly Line?

Ransom E. Olds was an 86 year old man who invented the Assembly Line in 1913 on December 1st. He lived from 1864-1950.

What the Assembly Line does

An Assembly Line is workers and machines in a factory, where each worker is with only one part of the product. The product is given to one worker to another until it is finished.

Problems the Assembly Line solved

The Assembly Line spread through American industry and was very great but also it replaced a lot of skilled workers with a bunch of unskilled worker, so that was bad.

Why is the Assembly Line important?

The Assembly Line it does things faster than humans would and saves a lot of time, and production of the Model T car increased a lot.

What other inventions came due to the Assembly Line?

There was a lot of inventions that came due to the Assembly Line like: automobiles and other transportations equipment, household appliances. and electronic goods.
