

Research one area that has been affected by a water shortage, and write an informative essay describing how people are responding to this shortage.

Water Shortage in Qatar

Water shortage is affecting many countries each year. However, some countries are at a higher risk of water shortage than the others. For my informative essay, I

choose to write about water shortage in Qatar and how it's affecting its people. Qatar is the most water-stressed country on Earth. Managing water in Qatar is always a major concern.

People of Qatar have difficulty getting fresh water. Qatar starting in 1953, started to store water and deliver to consumers in tankers. This country tries to improve water security and puts it in its top strategic goals. Water shortage is also affecting Qatar's agriculture as it is using underwater to grow crops.

Qatar households consume lots of water per day in comparison to other neighboring countries. The Qatari government is thinking of planning and implementing policies that would restrict water usage for residence. The government also tries to bring awareness of water scarcity among young people. To do so, it is launching many national campaigns.

Water shortage puts restrictions on how much Qatari people can use water per day. For instance, the government forces residents to reduce outdoor hose water usage.

Qatar will have a high rate of population growth. Also, climate change and reduced rainfall will play a huge role in

even more water shortage in Qatar. Since this country is highly dependent on food imports, the agriculture and water supply to that department will remain a major concern for the Qatari government.
