

Modern television

Melanie

Modern TV was made in 1925 the word Television had been found by a Frenchman constantin perskyi.

TV helped get rid of boredom and entertained the watcher

This is how a tv is made Entering the array process,thin film deposition,chemical layered onto glass substrate,photoresist coating,exposure the substrate under UV light,shading the light selectively using the light mask,the pattern on the light mask is transferred onto the glass substrate,entering the cell processing for color filter substrate,polyimide printing,rubbing,liquid crystal dispensing,assemble and seal the tft and color filter substrates,scribble and break the substrates into the desired dimension,polarizer lamination,and last completion of cell process.
