

Research one area that has been affected by a water shortage, and write an informative essay describing how people are responding to this shortage.

This water shortage happened in Flint Michigan. It started in 2017. Kids had to drop out of school to help their parents find water or look after their younger siblings so they can live. It was hard on the kids to do this big task even though they were kids they had to help their parents. They each had a job to work on; they all had to help even the younger ones that were 2 through 5.

This water shortage happened because the pipes were very old and because they were very old the water pipes caused the water to get poisoned. But at the same time the people that lived there would take the water from the Flint river without care and did not treat the river properly and did not think correctly and think what could have happened. The United Nations recognized the importance of addressing this each year on world water day March 22.
