

The water drought in Iraq

Iraq is experiencing drought, and with blazing temperatures declining rainfall and ongoing Dam work. The situation will be extremely serious, says Ali Alkarkhi, A Piece of Iraq's Save Tigris campaign. Water policy has been clearly omitted. The water policy problematic but yet logical information that has been a second piece event in the epic victory against ISIS in 2017. This is notably urgent given that brutal disputes related to water scarcity have flared. Up beyond Iraq all this underscores the critical importance of water security in Iraq.

Hassan Janabi Iraq's water resources minister, the amount of water flowing in Iraq's rivers has fallen 40 percent in recent decades. Largely due irregular rainfall. The waterkeeper alliance Iraq branch conducted a threat assessment and found the dams were one of the most threats to the lower Zab river ecosystem. According to Musa, "While rivers have historically connected us, dams are dividing us. Of Iraq's water resources, 70 percent come from rivers and marshes shared with its neighbors.
