

Water Shortage in TEXAS!!

What is a water shortage you might ask?? (A water shortage is when you live somewhere where very little water gets to you. Also, the shortage can happen with you running out of water, which means you won't have it to drink, shower with, wash clothes, do the dishes and so much more. We can't live without water so that was a very terrible time).

Where did this happen?? (This devastating water shortage happened in Texas. Texas, has had some rough times due to many storms, fires and DROUGHTS!! So Texas has not really been in a great situation so far mainly because of all the things that had been going on. I mean adults, kids, even elderly people need water. It's something you CANT live without.).

When did this happen?? (This water shortage happened on Feb. 19 2021, It was a very hard time not only for texas but for the rest of the world because there is a pandemic going on right now and jobs are

getting easier to lose which means that people can lose money and then, that means that bills will be harder to pay, payments will be late all due to this situation. It's important that we need everything we need so we keep ourselves healthy and wealthy).

Who was involved in this situation?? (15 million people were involved, (kids, adults, elderly) - I am also sure that it affected farmers, and it was very hard for them because they have a commitment and not having any water can make the crops dry up and not grow which is a waste of seeds and money at this point. It was also very hard for many people to only have the smallest amount of water to use in everyday life. But, six months later the water was already getting restored which relieved many people mainly because water is the number 1!! thing we need to survive).

How did this happen?? (This water shortage happened due to extreme water combined with climate change which made it harder to use/get water for farmers, planters, and the water in and outside of your home..
