

Neptune is 15.299 AU and its day is 16.1 hours. It is made of icy hot dense fluid of icy materials - water and ammonia - above core - small rocky. The temperature is -200 degrees and Neptune is the farthest planet from the sun. It was discovered in September 23, 1846 and Neptune is the smallest planet of the gas giants. Size compared to Earth of the sun is 109 times the diameter of the Earth and the surface temp is 5,78K and also core temp is billion degrees Celsius and the age of the sun 4.603 billion years, Mass it takes up in the solar system is 99.8%. Size compared to Earth of Mars it is more than half the size of Earth and length of day is 1 d 0h 37m and also length of year is 687 days.
